# EU AI ACT CHEAT SHEET

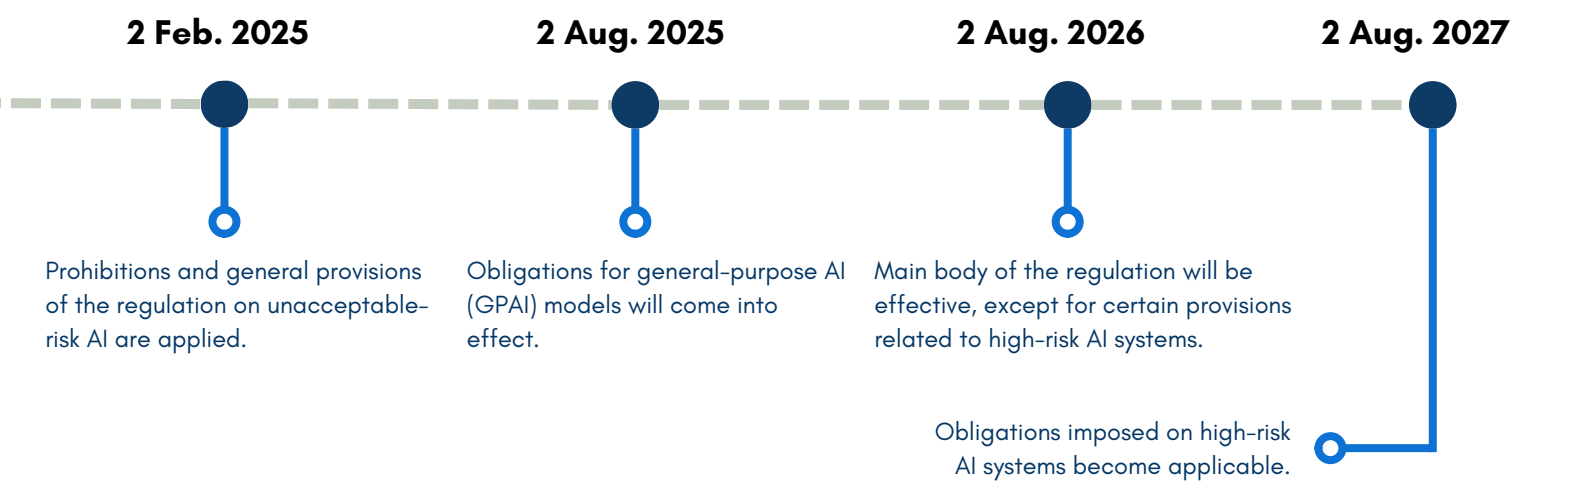

# Purpose of the AI Act<sup>1</sup>

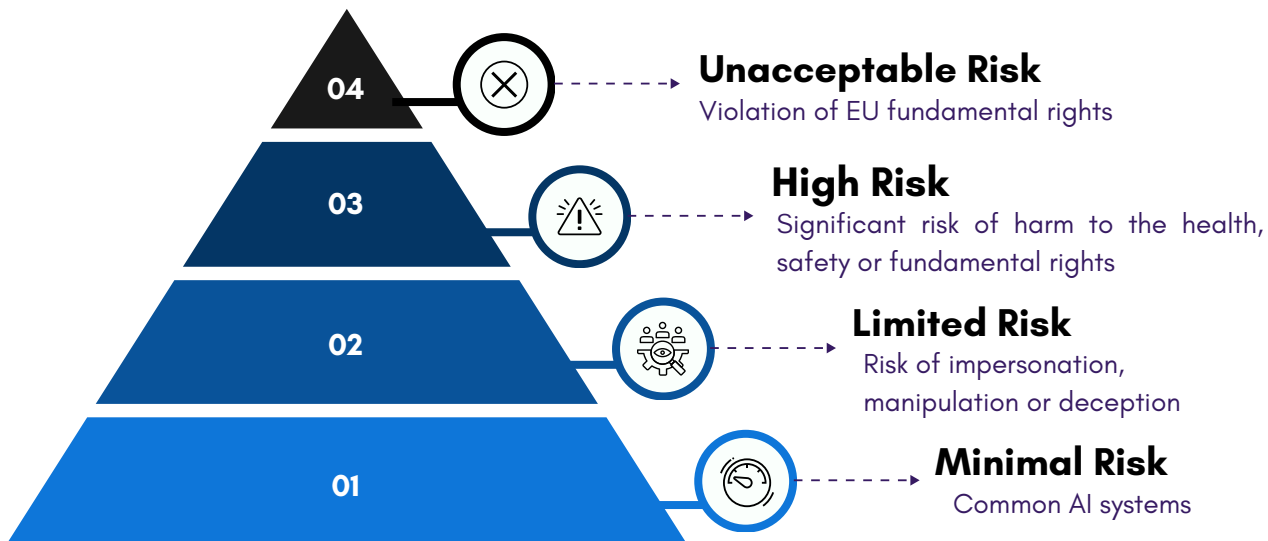

# Organizations within Scope<sup>2</sup>

# Implementation Timeline<sup>3</sup>

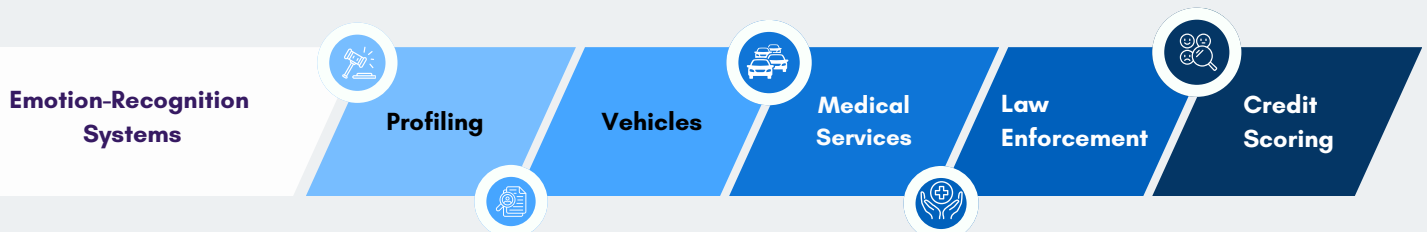

# Artificial Intelligence System Risk Hierarchy <sup>1</sup>

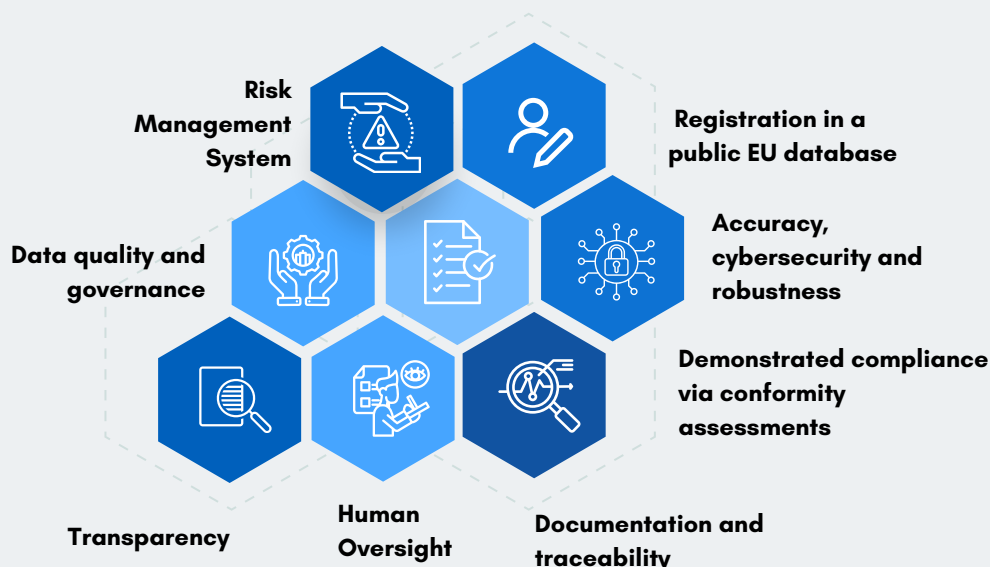

## High-Risk AI System <sup>2</sup>

### What is High-Risk AI System?

- a) AI systems that pose a significant risk of harm to the fundamental rights of natural persons, covering six areas below.
- b) Required to undergo third-party conformity assessment.

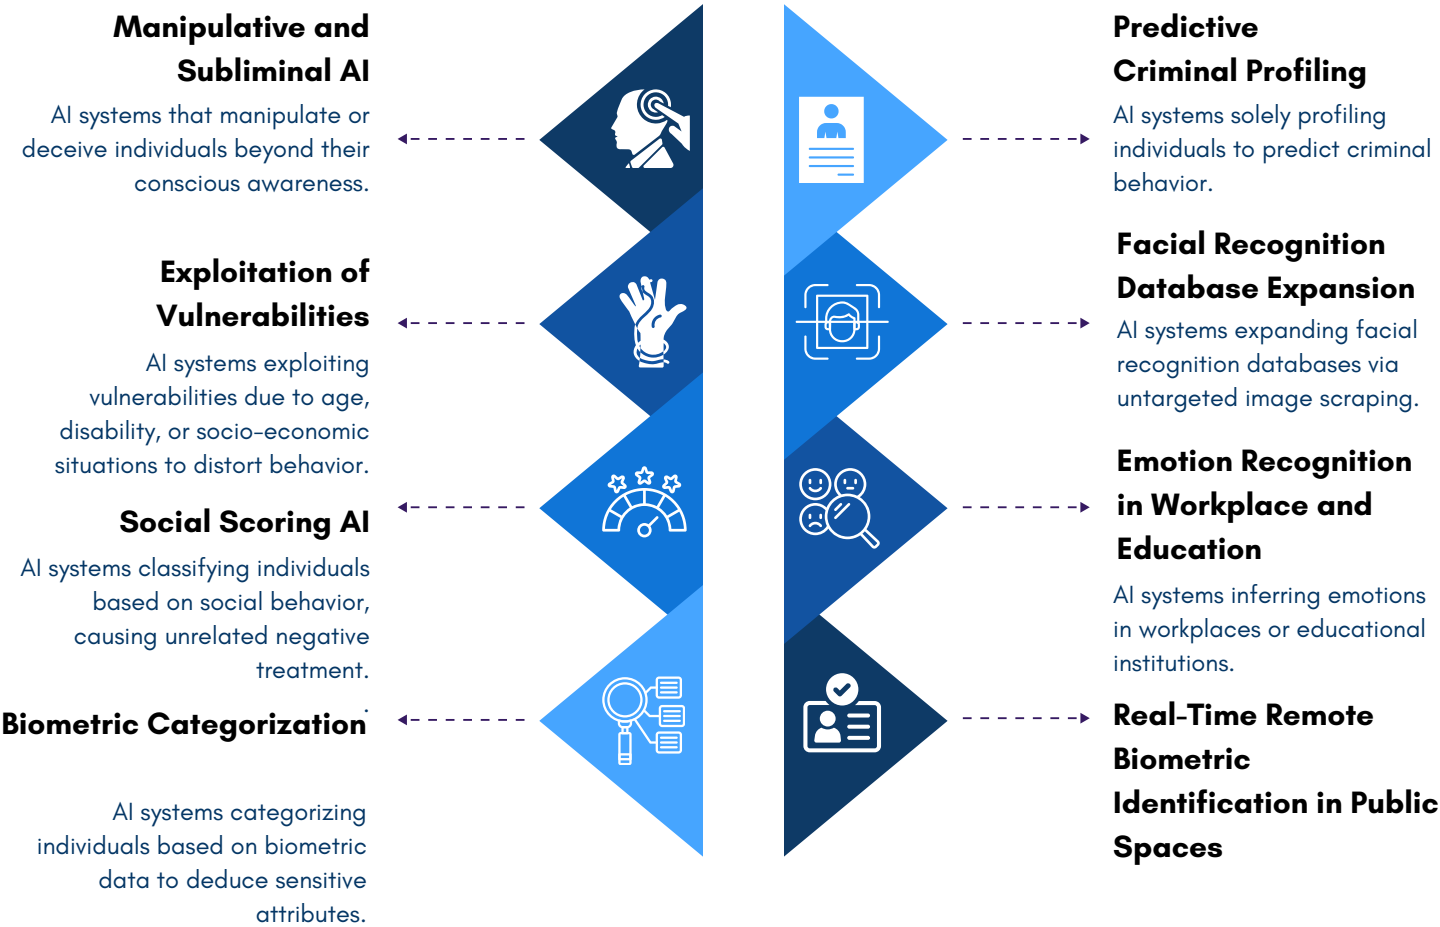

## Key Requirements for High-Risk AI System <sup>3</sup>

1. KPMG, Decoding the EU AI Act, p. 13. 2. EU AI Act, Article 6 (3) & IAPP EU AI Act 101 Overview, p. 2.

3. IAPP EU AI Act 101 Overview, p. 3.

# Prohibited AI Practices<sup>1</sup>

# Transparency Requirements<sup>2</sup>

Transparency requirements are the requirements for "limited risk" classified AI systems.

Providers

Providers shall ensure that AI systems intended to interact directly with natural persons are designed and developed in such a way that the natural persons concerned are **informed that they are interacting with an AI system**.

Providers of AI systems, including general-purpose AI systems, shall **ensure that the outputs of the AI system are marked in a machine-readable format and detectable as artificially generated or manipulated**.

Deployers

Deployers of an emotion recognition system or a biometric categorisation system shall **inform the natural persons exposed thereto of the operation of the system**.

Deployers of an AI system that generates or manipulates image, audio or video content constituting a deep fake, shall **disclose that the content has been artificially generated or manipulated**.

# General-Purpose AI Models (GPAI)<sup>1</sup>

## What is GPAI?

**AI models** that display significant generality and are capable of competently **performing a wide range of distinct tasks**, regardless of how they are placed on the market, and that can be integrated into a variety of downstream systems or applications. **The greater testing and reporting requirements are imposed on GPAI with systemic risk.**

## Key Requirements for Providers of GPAI<sup>2</sup>

- Perform \* **FRIAs** and conformity assessments.
- Implement **risk management and quality management systems** to continually assess and mitigate systemic risks.
- **Inform individuals** when they interact with AI. AI content must be labelled and detectable.
- **Test and monitor for accuracy**, robustness and cybersecurity.

\* FRIAs: Fundamental Rights Impact Assessment

# General-Purpose AI Models with Systemic Risks<sup>3</sup>

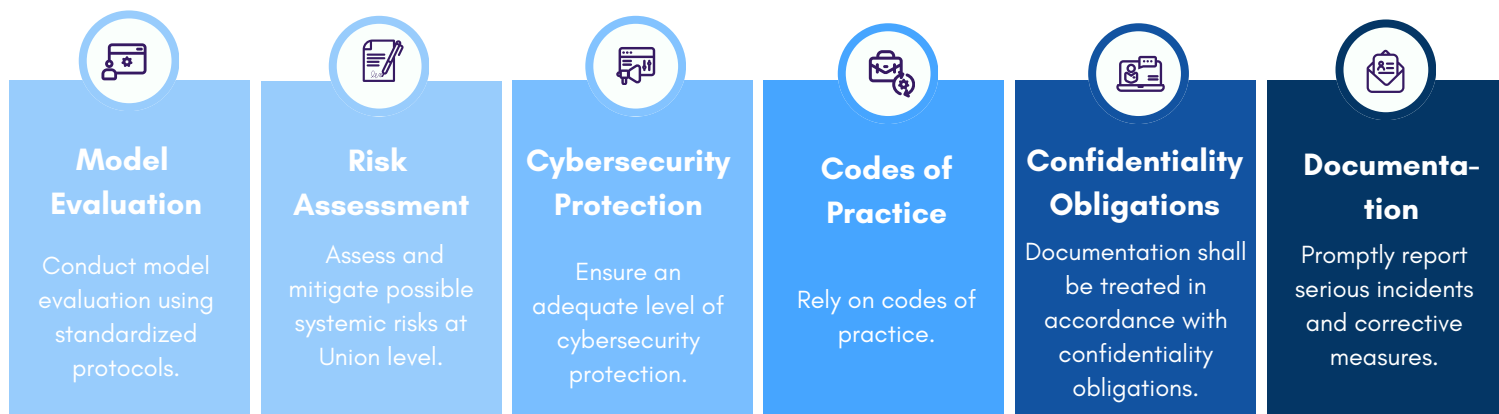

## What is GPAI with Systemic Risks?

GPAI models that pose significant large-scale threats to society or the economy.

**GPAI with Systemic Risks should meet either of these conditions:**

1. Has high-impact capabilities evaluated using appropriate technical tools and methodologies.
2. It is determined by the European Commission to have capabilities or impact equivalent to those with high-impact capabilities.

## Key Requirements for GPAI Models with Systemic Risks<sup>4</sup>

1. EU AI Act, Article 3 (63). 2. IAPP EU AI Act 101 Overview, p. 3. 3. <https://artificialintelligenceact.eu/article/51/>

4. <https://artificialintelligenceact.eu/article/55/>

# Regulators

Each Member State must designate at least one notifying authority and one market surveillance authority, which must operate independently and impartially to enforce the Regulation effectively. <sup>1</sup>

For high-risk AI systems used by financial institutions, the relevant national financial supervision authority will act as the market surveillance authority under this Regulation. <sup>2</sup>

# Enforcement Powers & Penalties

The market surveillance authorities shall report annually to the Commission about the use of prohibited practices that occurred during that year and about the measures taken. <sup>3</sup>

Prohibited Practices<sup>4</sup>

(i) The AI system does not comply with the requirements and obligations laid down in this Regulation.

(ii) Although a high-risk AI system complies with this Regulation, it nevertheless presents a risk to the health or safety of persons, to fundamental rights, or to other aspects of public interest protection.

Penalties<sup>5</sup>

Prohibited AI Violation

Up to 7%a of global annual turnover or 35 million euros

Misleading Information to Authority

Up to 1% of global annual turnover or 7.5 million euros

Other Violations

Up to 3% of global annual turnover or 15 million euros

# Major challenges by the AI Act<sup>6</sup>

Protecting the fundamental rights to the privacy through sustainable data processing

Fostering development and innovation of AI ecosystem

Understanding the relationship between the AI Act and the existing regulations governing AI systems

Managing the evolving network of stakeholders involved in supervision and enforcement

Establishing suitable multidisciplinary governance frameworks within organizations
